

Only \$9,720!
(plus labor)

Upgrade your HMC 500 to run Tool Studio!

Helitronic Power and Mini Power machines from 1997-2003 can be upgraded to support current versions of Windows XP, which allows you to run the latest Walter software. (The machine will no longer run the old DOS interface however.) Plus you get other hardware improvements.

- **Run the latest Walter Window Mode (WWM) and Tool Studio software and grind competitive new tool geometries**
- **Faster calculations**, reducing cycle times and increasing productivity
- **Faster navigation** through menus
- **Improved networking** capabilities
- **USB interfaces** for peripherals like memory sticks or CD burners for data back-up
- **Rewired touch probe** increases speed and greatly improves tool measurement accuracy

Our upgrade program is *superior to what you'd get from the OEM* and includes:

- Full rebuild of MMI and NC control, including cleaning of control boxes and power supplies, two new box fans each, new batteries on PCS card (PLC) and MFA card, checkup and adjustment of all voltages
- Wiring of "probing through the drives" (required for Tool Studio)
- HMI CPU 1.8 GHz Pentium M with 2 GB RAM (ready for Tool Studio)
- NC CPU 1.5 GHz Celeron M with 128 MB RAM
- 80 GB hard drive pre-installed with Windows XP
- 3.5" floppy drive
- 4x USB adapter
- New cables for the floppy and hard drives
- Software: Windows XP with proper system backup software (e.g. Acronis), plus we'll transfer your control software, WWM and license keys from the old hard drive to the new one
